

ROBOT DANCE PARTY

Chocolate bars contain sugar, and sugar, in moderation, gives us humans energy to do a lot of fun stuff through the day. It seems a group of robots have been seeking out new sources for energy and have chosen sugar as a good source. The chocolate bars being sold by your school are their next target so we need to sell them before they get too many.

Why do they need so much energy? Robots love to dance.

As you sell chocolate the robots will begin to appear. One robot for each case of chocolate to be exact. ***For each case you sell you will be able to capture one Light Up Robot for yourself.*** With their ability to light up you will surely be able to join in with the dancing robots.

Truthfully, though, lighting up like a robot isn't enough to really get you into their dance. You need to have the right look. ***Sell 3 cases of chocolate and you will receive LED Rockstar Glasses.*** These can make you look enough like a robot for them to not notice that you aren't.

Robots really like lights. They often communicate with them. ***Sell 6 cases of chocolate and you will receive a Disco Light Bulb.*** I am still not sure what the exact meaning of the lights are, but the robots seem to get really love to dance under them.

Robots have great light sensors and can dance even in dark places. We humans don't always see well in the darkness and it could be danger to our toes to dance in it. ***Sell 10 cases of chocolate and you will receive Light Up Shoelaces.*** These laces can save your toes from being stepped on by other dancers as long as they see your feet anyway.
